Profile

Having more than three years of experience as a QA engineer, worked in teams using Scrum, Lean, and fully chaotic development.
Confident working with task trackers and test management systems (YouTrack, Jira, ClickUp, QAcovrage, Qase, Doqa).
Creating and maintaining test documentation: test cases, checklists, and other QA artifacts.
Testing RESTful APIs using Postman, Swagger etc.
Working with databases: write complex queries with joins and aggregations, validate migrations and seed results, check indexes, and analyze ERDs.
Experienced with Linux: log analysis, service port checks, working with configs and env files.
Understand Git: switching between branches for testing, run pipelines in Gitlab for frontend and backend. Same for Android Studio for mobile testing.
Understand the key differences between microservice architecture and a monolith and how this affects testing.

Experience

QA Engineer [Backend & Mobile], *Web-studio Regul, LLC*  01/2025 - Present

Responsibilities:

Design and execution of functional, integration, and regression testing of microservices in three stages across dev1/2/3, staging, and production environments.
Testing services interactions via REST API and RabbitMQ.
Analysis of database schemas, complex relations, and business logic at the data level.
Writing SQL queries (PostgreSQL/MySQL): aggregations, joins, nested queries.
Validation of migrations, seed data, and data integrity.

Work with Git:

Launching pipelines with required branches for deployment to test and stage environments (backend and frontend of the web application). Switching (checkout) to required branches in Git through Android Studio to test **MacOS**, **iOS**, and **Android** native apps on both emulators and physical devices.

Billing and calculation verification:

Validation of the pricing model and token based cost calculation: USER and ASSISTANT requests, USD conversions, internal platform tokens, discounts, bonuses, tariff packages, overuse, etc.
Analysis of RabbitMQ events (mostly billing and payments), creation and validation of test scenarios for invoice generation.

Communication and cross team interaction:

Close collaboration with developers, analysts, product manager, tech lead, architect, and DevOps.
Participation in meetings, contribution to feature requirements and improvements. Onboarding new QA engineers, mentoring, and supporting the team.

Documentation and processes:

Creation and maintenance of QA artifacts: test scenarios, checklists, guidelines, and incident handling instructions.

Additional role: L3 support

Incident localization: analysis of logs, databases, user screencasts, and correlation of business processes with customer's requests. Preparation of reports, description of root causes (RCA), and work within a three line support model. Verification of conclusions and localization results from QA engineers on previous stages.

Recent (1-2 month old) achievements:

- Single handedly completed the full testing cycle of a large release containing eight full scale stories with changes across multiple services, migrations, billing, numerous new routes, and reworked legacy ones. Not a single defect made it to production.

dima@khitryi.com

- Led a two week cycle of daily interviews that resulted in the company hiring strong specialists who were able to quickly onboard and start testing. Their onboarding was also entrusted to me.

QA Engineer, 101 internet [🔗](#)

10/2023 - 08/2024

- Manual microservice-based web app testing (Smoke, Regression, E2E, UAT)
- Writing and maintaining test documentation
- Solely introduced and operationalized the Qase test management system, taking full responsibility for its management and maintenance
- Utilized tools like JAM, DevTools, GraphQL Network, Postman, DBeaver, MongoDB Compass, and others.

QA Engineer, base86 [🔗](#)

04/2023 - 10/2023

Key responsibilities:

- Conducted comprehensive testing on a company-developed web application.
- Improved the clarity, testability, and traceability of user stories by updating requirements.
- Actively engaged in defect review meetings with QA team members and closely monitored the status of defects.
- Developed and managed test cases for both smoke and regression testing.
- Collaborated closely with Software Developers to identify, track, and resolve defects.

Achievements:

- Achieved 100% test coverage for my system segment, ensuring thorough quality assurance.
- Successfully resolved 20+ critical issues and blockers, preserving release schedules through efficient troubleshooting.
- Maintained bug-free releases for six sprints in a row, demonstrating a commitment to top-notch software delivery.
- Played a crucial role in team growth by onboarding and mentoring five QA interns, enhancing their skills and team productivity.

Other Experience

2013 - 2021

- Three years of high-class Tech Expertise and Mobile Troubleshooting at **Samsung** as a **Senior Tech Expert**.
- Five years of **eCommerce** experience in **Huawei CBG** and **Hansa** (Amica Group).
